Summary

Self- directed, detail-oriented, and professional C/Unix programmer with 16 software development experience in designing, developing, and testing telecommunications software in primarily C/Unix. Expertise in all phases of team software development process. Capable of learning new programming languages and technologies and completing projects within specified deadlines.

Skills

C#	Sql	Git
Html	Asp.Net	VisualStudio
Css	Javascript	React
C	C++	Unix
Java	Data Networking Protocols (TCP/IP, wireless)	

Education

Devry-Chicago

July 1984 - February 1987

Bachelor's in Computer Information Systems

Cumulative GPA: 3.75/4.00

Here I learned software development as it relates to mainframe computing with a lot of COBOL along JCL, IMS, CICS. My senior project provided me a connection that gained a software development position with AT&T Bell Labs.

Truecoders

August 2025 - Current

Software Engineering (Online)

Here I'm learning the current technologies to enable me to level up and regain a software development position.

Work Experience

Advacare Systems, Inc

August 2021 - Current

Clean and repair durable medical equipment such as beds, wheelchairs, over the bed tables, oxygen, etc. Also, drive box truck for pickup/transfer equipment.

SCR Medical Transportation

July 2020 - August 2021

Drove a small Pace Bus to take clients throughout the Chicagoland area to their Appointments.

First-Choice Medicar

December 2018 - July 2020

Non-emergency medical driver who mostly transported dialysis patients to their appointments.

American Auto-Hikers

July 2009 - December 2018

Shuttle driver responsible for taking drivers to auto dealerships/auctions. Other responsibilities included providing drivings with directions and gas money to deliver their vehicles safely. I also handled interactions with the auctions and dealerships.

Software Development Experience

AT&T Bell Laboratories

May 1987 - September

2003

Naperville, IL

Here I began my software development career coding software applications for the local AT&T 5ESS switch. At the time, it was one of the biggest software projects in the world which was primarily coded in C/Unix.

Here I coded and tested various networking protocols such as ISDN Q.931(3), TCP/IP, ICMP, UDP, SS7, etc. Towards the end there, I worked on some of the wireless protocols such as TDMA and CDMA as they related to data transfer.

I was also involved on testing teams that ensured existing call related features (i.e., call forwarding call transfer, etc) still operated properly with concurrent new development projects.

Some other projects I worked included Advanced Intelligent Networks, switch maintenance, simulation environments that enabled developers to test their softwares on the their personal computers as an alternative/supplement to lab testing.
