Education

TrueCoders — *Advanced Technical Training* — Aug 2026 - May 2026

The TrueCoders training program is a project and lecture-based training program that aims to fill the growing need for software development jobs. Projects include several personal tasks that involve multiple programming languages over the course of the program.

- Over 300 hours of intensive, project-based training in programming languages and other technical skills, such as C#, .NET Core, SQL, Git, ASP.NET MVC, HTML, CSS, and JavaScript.
- These skills were developed by building multiple C# and SQL projects
- C# and SQL Projects were tracked using Git and GitHub for source control.

[View Certificate](#)

DeVry University (Chicago – GPA 3.75/4.00) B.S. Computer Information Systems

Here I learned software development as it relates to business mainframe computing with several trimesters of COBOL alongside several others technologies such as Assembly, JCL, IMS, CICS, etc. My senior project for a real estate firm provided me the connection that helped me obtain my first software development position with AT&T Bell Labs.

Final Project

One Year Bible — C# | ASP.NET MVC | API | JavaScript | HTML/CSS | Azure

Developed a full-stack web application utilizing ASP.NET Core MVC Framework and JavaScript that provides a user with a calendar grid display to select a days bible readings, which include old testament, new testament, psalm, and proverbs scriptures.

Project Highlights

- Using Repository Pattern to enforce separation of concerns and maintainable code.
- Delivered a robust, scalable solution by deploying the ASP.NET Web Application.
- The user interface and experience with a modern stack including JavaScript, HTML/CSS, Bootstrap, and Razor templating.

Software Development Experience

Languages

- C#
- SQL
- JavaScript
- HTML
- CSS

Technologies

- ASP.Net MVC
- .NET Core
- MySQL
- Dapper
- REST

Skills

- Test-Driven Development
- Clean Architecture

Certificates

- [True Coders Full-Stack Software Engineer](#)

AT&T Bell Laboratories (later spun into Lucent Technologies, now Nokia)— C | Unix

Here I began my software development career coding software applications for the local AT&T 5ESS switch. At the time, it was one of the biggest software projects in the world which was primarily coded in C/Unix.

Here I coded and/or tested various networking protocols such as ISDN Q.931(3), TCP/IP, ICMP, UDP, SS7, etc. Towards the end there, I worked on some of the wireless protocols such as TDMA and CDMA as they related to data transfer.

I was also placed on testing teams that ensured existing call related features (i.e., call forwarding, call transfer, etc.) still operated properly with concurrent new development projects.

Some other projects/area I worked on included Advanced Intelligent Networks, switch maintenance, simulation environments that enabled developers to test their software on their personal computers as an alternative/supplement to lab testing.
